Abstract

1 There has been enough research around artificial Intelligence, MLPs are the ones
2 leading the charge for this new frontier. After

3 1 Introduction

4 It has become irrelevant to even talk about the scale of machine learning models given the current
5 intended audience, but as we start with the topic.

6 The reason for this exploration stems not from inability of using MLPs in certain domains, but rather
7 from other issues with MLPs that we aspire to solve. To name a few, the lack of interpretability, the
8 need for large amounts of data to generalize well, and the lack of robustness to adversarial attacks.

9 A good introduction to KANs can be found in ?, which also discusses the historical context of
10 KANs and their evolution over time. Along with this, a comprehensive survey on KANs with
11 implementations is given in ?. There has been significant research, and many new versions of KANs
12 have been proposed just in the last decade ?.

13 Edit more here

14 One of the promising alternatives to MLPs are KANs (Knowledge Augmented Networks) ?. The
15 reason for this prominence is the extraordinary claim about KANs being free from the curse of
16 dimensionality, which plagues MLPs in high dimensional data scenarios. Another reason why KANs
17 seem more attractive is their inherent interpretability, as they are based on well-defined mathematical
18 principles ?.

19 With newer studies and architectures being proposed, a promising result shows that KAN-based
20 transformers can in some cases outperform MLP-based transformers ?.

21 There are many people who have written an literature review on this topic. I found literature about a
22 fair comparison between different approaches using KAN and MLP respectively, to benchmark the
23 performance difference across different domains like NLP, audio processing, Computer Vision ?.

24 2 Method

25 We have started with the basic KAN architecture

26 3 Headings: first level

27 All headings should be lower case (except for first word and proper nouns), flush left, and bold.

28 First-level headings should be in 12-point type.

29 **3.1 Headings: second level**

30 Second-level headings should be in 10-point type.

31 **3.1.1 Headings: third level**

32 Third-level headings should be in 10-point type.

33 **Paragraphs** There is also a `\paragraph` command available, which sets the heading in bold, flush
34 left, and inline with the text, with the heading followed by 1 em of space.

35 **4 Citations, figures, tables, references**

36 These instructions apply to everyone.

37 **4.1 Citations within the text**

38 The `natbib` package will be loaded for you by default. Citations may be author/year or numeric, as
39 long as you maintain internal consistency. As to the format of the references themselves, any style is
40 acceptable as long as it is used consistently.

41 The documentation for `natbib` may be found at

42 `http://mirrors.ctan.org/macros/latex/contrib/natbib/natnotes.pdf`

43 Of note is the command `\citet`, which produces citations appropriate for use in inline text. For
44 example,

45 `\citet{hasselmo}` investigated\dots

46 produces

47 Hasselmo, et al. (1995) investigated...

48 If you wish to load the `natbib` package with options, you may add the following before loading the
49 `neurips_2024` package:

50 `\PassOptionsToPackage{options}{natbib}`

51 If `natbib` clashes with another package you load, you can add the optional argument `nonatbib`
52 when loading the style file:

53 `\usepackage[nonatbib]{neurips_2024}`

54 As submission is double blind, refer to your own published work in the third person. That is, use “In
55 the previous work of Jones et al. [4],” not “In our previous work [4].” If you cite your other papers
56 that are not widely available (e.g., a journal paper under review), use anonymous author names in the
57 citation, e.g., an author of the form “A. Anonymous” and include a copy of the anonymized paper in
58 the supplementary material.

59 **4.2 Footnotes**

60 Footnotes should be used sparingly. If you do require a footnote, indicate footnotes with a number¹
61 in the text. Place the footnotes at the bottom of the page on which they appear. Precede the footnote
62 with a horizontal rule of 2 inches (12 picas).

63 Note that footnotes are properly typeset *after* punctuation marks.²

Figure 1: Sample figure caption.

Table 1: Sample table title

Part		
Name	Description	Size (μm)
Dendrite	Input terminal	~ 100
Axon	Output terminal	~ 10
Soma	Cell body	up to 10^6

64 4.3 Figures

65 All artwork must be neat, clean, and legible. Lines should be dark enough for purposes of reproduction.
 66 The figure number and caption always appear after the figure. Place one line space before the figure
 67 caption and one line space after the figure. The figure caption should be lower case (except for first
 68 word and proper nouns); figures are numbered consecutively.

69 You may use color figures. However, it is best for the figure captions and the paper body to be legible
 70 if the paper is printed in either black/white or in color.

71 4.4 Tables

72 All tables must be centered, neat, clean and legible. The table number and title always appear before
 73 the table. See Table 1.

74 Place one line space before the table title, one line space after the table title, and one line space after
 75 the table. The table title must be lower case (except for first word and proper nouns); tables are
 76 numbered consecutively.

77 Note that publication-quality tables *do not contain vertical rules*. We strongly suggest the use of the
 78 booktabs package, which allows for typesetting high-quality, professional tables:

79 `https://www.ctan.org/pkg/booktabs`

80 This package was used to typeset Table 1.

81 4.5 Math

82 Note that display math in bare TeX commands will not create correct line numbers for sub-
 83 mission. Please use LaTeX (or AMSTeX) commands for unnumbered display math. (You
 84 really shouldn't be using \$\$ anyway; see <https://tex.stackexchange.com/questions/503/why-is-preferable-to> and [https://tex.stackexchange.com/questions/40492/](https://tex.stackexchange.com/questions/40492/what-are-the-differences-between-align-equation-and-displaymath)
 85 [what-are-the-differences-between-align-equation-and-displaymath](https://tex.stackexchange.com/questions/40492/what-are-the-differences-between-align-equation-and-displaymath) for more infor-
 86 mation.)
 87

¹Sample of the first footnote.

²As in this example.

88 4.6 Final instructions

89 Do not change any aspects of the formatting parameters in the style files. In particular, do not modify
90 the width or length of the rectangle the text should fit into, and do not change font sizes (except
91 perhaps in the **References** section; see below). Please note that pages should be numbered.

92 Most of the margin problems come from figures positioned by hand using `\special` or other
93 commands. We suggest using the command `\includegraphics` from the `graphicx` package.
94 Always specify the figure width as a multiple of the line width as in the example below:

```
95 \usepackage[pdftex]{graphicx} ...  
96 \includegraphics[width=0.8\linewidth]{myfile.pdf}
```

97 See Section 4.4 in the graphics bundle documentation ([http://mirrors.ctan.org/macros/](http://mirrors.ctan.org/macros/latex/required/graphics/grfguide.pdf)
98 [latex/required/graphics/grfguide.pdf](http://mirrors.ctan.org/macros/latex/required/graphics/grfguide.pdf))

99 A number of width problems arise when L^AT_EX cannot properly hyphenate a line. Please give LaTeX
100 hyphenation hints using the `\-` command when necessary.

101 A Appendix / supplemental material

102 Optionally include supplemental material (complete proofs, additional experiments and plots) in
103 appendix. All such materials **SHOULD be included in the main submission.**
